## Description

An intelligent sensor guides your epilation, ensuring the right amount of pressure is applied to remove even more hair in one stroke. A light signals that you are pushing too hard, and prompts you to adjust your handling for more efficient epilation.

## Main features

|                     |                                                 |
