Description

In building on the advances introduced with the Epson UltraChrome K3 ink with vivid magenta, Epson has engineered the UltraChrome HDR (High Dynamic Range) pigment ink technology. While still retaining its key features, such as three-level black ink for superb gray balance, and smooth tonal gradations from shadow to highlight, UltraChrome HDR comprises several new important innovations that contribute to dramatically enhanced print and color quality.

One of the most significant advantages of the UltraChrome HDR ink is the inclusion of orange and green inks, which bring about dramatic expansion in the color gamut, especially in the bright /vivid green to yellow, and yellow to red ranges. In particular, with the orange ink, the Epson HDR ink technology delivers a major reduction in image grain that is typically evidenced ink skin tone reproductions.
