Description

Incorporating high density pigments, Epson UltraChrome K3 produces prints with an extremely wide color gamut allowing the reproduction of colors that were originally envisioned at the point of capture. With its expanded color gamut and breakthrough 8-color system, no other ink set can reproduce the three dimensional lifelike quality and stunning photographic feel of Epson UltraChrome K3.

Utilizing a unique three level black ink technology, Epson UltraChrome K3 ink significantly improves overall gray balance while enhancing midtone and highlight detail yielding a smoother tonal range.

Epson UltraChrome K3 ink incorporates High-gloss Microcrystal Encapsulation technology along with unique screening algorithms and light Black ink that significantly reduces gloss differential. There is no longer any compromise for professionals that require glossy prints that have excellent longevity and durability.

Epson's unique driver technology takes full advantage of the three-level black ink system, allowing the production of the highest quality neutral and toned prints from a single ink set. In addition, proprietary Epson screening technology, developed specifically for black and white printing, produces outstanding image quality with no color crossover or color cast. For the first time photographers can make sellable black and white prints without going into a darkroom.

Main features

Product Description	Epson UltraChrome K3 T5631 - photo black - original - ink tank
Product Type	Ink tank
