

Gardena RollUp S - Hose box with hose

15 m

Group	Irrigation Equipment
Manufacturer	Gardena
Manufacturer item no.	18606-20
EAN/UPC	4078500051965

Description

Watering that's always ready for action: the Gardena Garden Hose Box RollUp S is no ordinary hose storage box. You will be thrilled how effortless watering your garden can be with this well-designed hose box. You can easily water your small garden and have maximum freedom of movement. It stands on a sturdy metal spike meaning you can install it anywhere in your garden without damaging a wall. The ground spike is screwed into the ground using a mounting rod and is therefore extremely stable. For use, simply extend the garden hose to a maximum of 15 meters and you can start watering immediately. The built-in short locking points ensure effortless handling and automatically fix the hose at the desired extension length. Thanks to the innovative design, the hose box can be swiveled through 360° and you can reach every corner of your garden. The hose box follows your movements while watering and prevents the water hose from kinking or tangling. In addition, this Garden Hose Box saves you from strenuous cranking, bending over and wet, dirty hands when rolling up: A short pull on the unrolled hose activates the integrated spring, which rewinds the hose fully automatically and reliably. To ensure that no blockages or twists occur, a hose guide keeps the garden hose on track and the RollControl technology ensures safe and controlled rewinding. The box is adjusted to the height of the Gardena Mowing Robots, so that the lawn around the hose box is always maintained and mowed. The high-quality material is protected by UV and frost protection, the box can remain in the garden all year round and guarantees you a long service life and use without maintenance. The box is especially compact and stylishly designed so that it can be easily integrated into any garden. The Garden Hose Box comes with a flexible connecting hose, all necessary assembly parts and original Gardena System Elements as well as a sprayer with two different spray patterns.
